FIDELIX BUILDING AUTOMATION SYSTEM INTEGRATED WITH TOSIBOX® REMOTE ACCESS READINESS

The leading provider of building automation systems integrates Tosibox's award-winning VPN remote access into its flagship product.

Fidelix's FX-3000-C is the controller of the building automation system that manages a variety of processes such as heating, ventilation, air conditioning and lighting. Fidelix has now added readiness for the [TOSIBOX®](#) technology, which provides a secure VPN remote connection between devices, to its product. The user only needs to activate the feature.

The FX-3000-C control unit is fully programmable and uses the open IEC 61131-3 standard for PLC programming. It utilizes open-standard communication protocols such as Modbus, M-Bus, BACnet, UDP and TCP. It also includes a built-in NAT router and a network server. The FX-3000-C has a browser-based user interface that allows easy control of building technology both on site and remotely.

Fidelix [trusts](#) the secure remote access Tosibox provides. The company has used TOSIBOX® products for some years now, for both remote connectivity and remote monitoring of building automation systems. After the positive experiences, the company decided that it wanted to integrate these features into their own product.

"We wanted to provide our customers with a secure solution in our flagship product using the TOSIBOX® technology. The overall solution remains simple as there is no need for a separate TOSIBOX® Lock device for remote access," says Product Development Manager **Pekka Lantto** from Fidelix.

"The TOSIBOX® technology provides Fidelix and its customers with a secure remote connection feature that allows operations such as maintenance to be carried out remotely. This means that Fidelix's product gains added value and is also better equipped to meet the challenging security requirements of the Internet of Things," says **Harri Väänänen**, Business Manager, Licensing at Tosibox.

The FX-3000-C product will be on display at Fidelix's stand A30:10 at the Nordbygg Fair in Stockholm between 10 and 13 April. Tosibox will also have its own stand at the fair. You can find us at AG:29.
