Tosibox security is now audited

Tosibox, a leading remote access solution provider, announces that the information security of the products, services, and operations of the company are now officially audited.

The audit was conducted during the first half of 2015 by a global independent company according to the ISAE3000 Assurance Standard. The controls and content of the audit were based on the ISO 27001:2013 standard and the OpenSAMM Software Assurance Maturity Model. Following the security audit, an ISAE3000 assurance report was issued.

The report allows Tosibox to demonstrate to customers and partners that the validity of internal control mechanisms of Tosibox services and system controls have now been evaluated and comprehensively audited by an independent third party.

"Product and information security is a top priority for Tosibox and with the results of the audit we can further assure our customers of the high level of the security of our products and services" comments Chief Executive Officer Tero Lepistö.

"During the entire history of Tosibox, we have always taken security extremely seriously and we have taken many extra measures in our product development to protect the privacy of our customers. Therefore we are proud to announce that no major discrepancies were noted in the technical audit" says Jari Tenhunen, Head of Research and Development.
