

Press release, January 9, 2019

TOSIBOX BECOMES MEMBER OF FINNISH INFORMATION SECURITY CLUSTER

Tosibox, the company developing secure IoT connectivity solutions has been accepted as full member of the Finnish Information Security Cluster (FISC) from January 1, 2019 onwards.

[Tosibox Oy](#) has developed the award-winning TOSIBOX® remote access solution that makes it easy and fast to establish secure connections, even without special IT skills. The scalable solution intended for companies of all sizes also enables centralized and real-time management of devices and access rights with unprecedented ease.

The globally patented TOSIBOX® technology performs at the highest security levels in the industry. The technology is based on two-factor authentication, automatic security updates and the latest encryption technology.

“Simplicity is one of the values defined in our strategy. Simplicity is also important from the viewpoint of security. In addition to making our products secure, we have put a lot of effort into making them easy to use. With fewer things for users to remember and worry about, the chance of human error in practice decreases. A high level of security is one of the most important features in our solutions, and thus our membership in FISC is important and excellent news for Tosibox,” says **Jarno Limnell**, CEO at Tosibox.

[Finnish Information Security Cluster](#) is an organization established in 2012. Its members consist of nationally remarkable companies and organizations offering information and cyber security products and services. FISC aims to generate more and international business opportunities for its member organizations and promotes the extensive utilization of cyber security know-how in the society. Cyber security involves everyone. Its continuous improvement necessitates extensive cooperation from the public and private sectors.
